

ISARA Advance™ on Microsoft Azure

CRYPTO POSTURE MANAGEMENT FOR ENTERPRISES AND GOVERNMENT AGENCIES

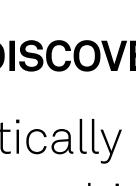

Deploy ISARA Advance on Microsoft Azure to automate cryptographic discovery and inventory, quantify risk, prioritize action, and accelerate remediation across applications, servers, databases, source code, and infrastructure.

Within hours of deployment, ISARA Advance helps teams identify cryptographic weaknesses, configuration gaps, and high-risk exposures so organizations can begin reducing risk quickly and systematically.

ISARA Advance on Azure Supports Enterprises In Four Steps

DISCOVER

Automatically inventory cryptographic assets, implementations, and dependencies across Azure-connected environments.

QUANTIFY RISK

Identify cryptographic weaknesses, misconfigurations, and exposures, then measure the risk they create across applications and infrastructure.

PRIORITIZE ACTION

Highlight the highest-risk assets, systems, and business dependencies so teams can focus remediation efforts where they matter most.

SUPPORT REMEDIATION

Enable security and IT teams to address cryptographic and configuration issues with greater speed and precision.

Actionable Insights For Every Stakeholder

Placeholder for paragraph content if needed on this section to further benefit SEO and differentiation.

- **For CISOs, CIOs, and Boards**

Gain visibility into enterprise cryptographic risk through snapshots, trend views, and burn-down reporting that support executive decision-making.
- **For business unit leaders, application owners, GRC teams, and security architects**

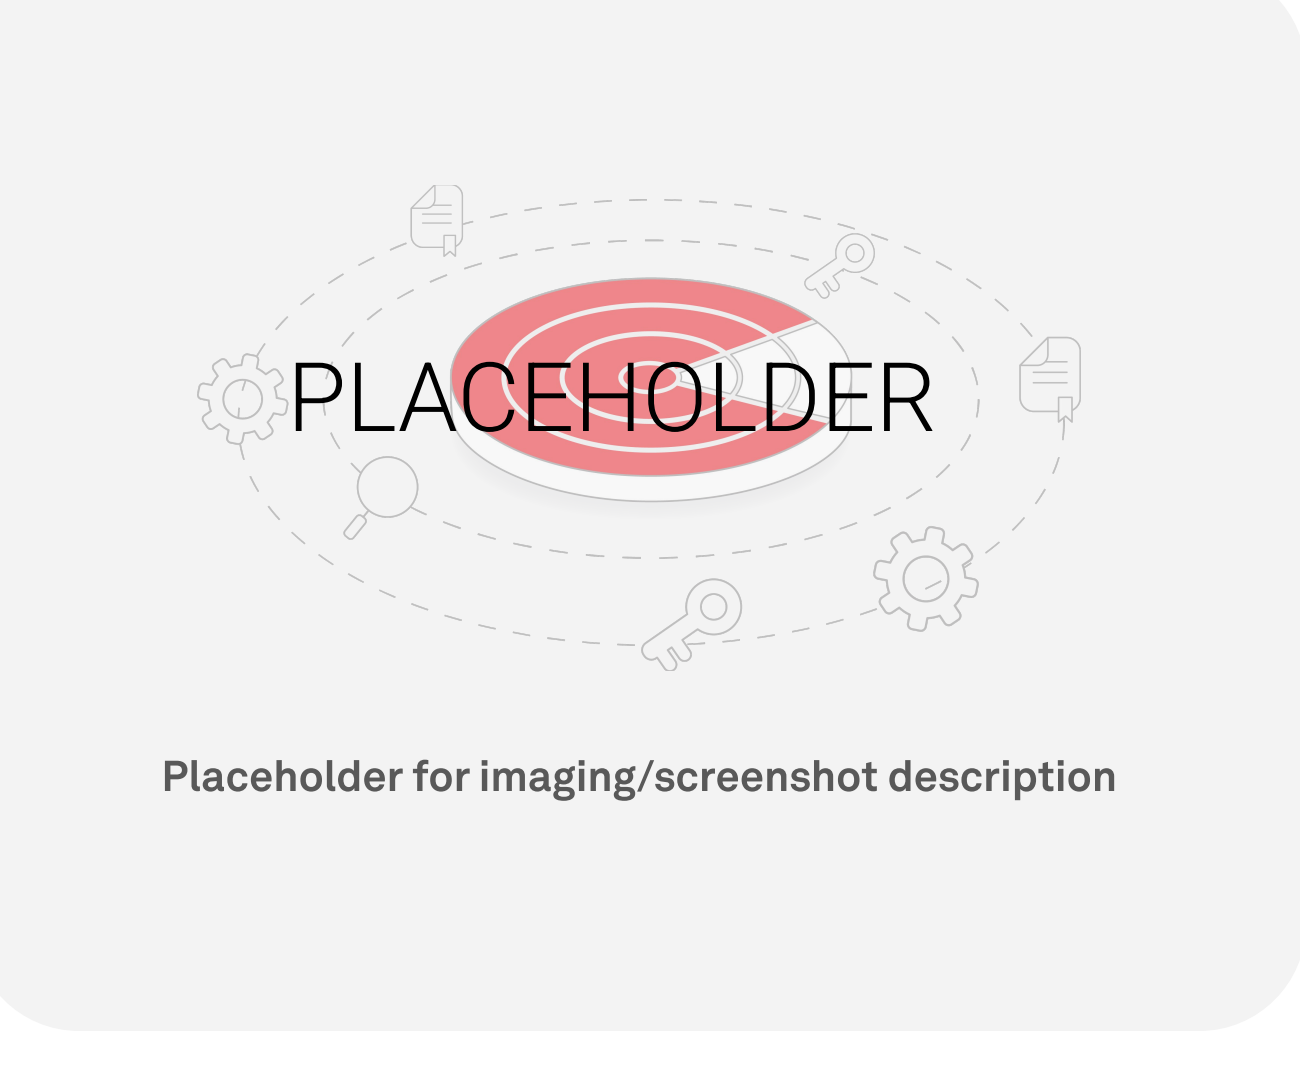

Identify high-risk applications and infrastructure, understand business impact, and align remediation priorities across stakeholders.
- **For security engineers and IT administrators**

Detect cryptographic weaknesses across applications, servers, infrastructure, and network environments to support operational remediation.

OFFICIAL MICROSOFT PARTNER

Built to Work Seamlessly With Microsoft Azure

ISARA Advance is deployed on Microsoft Azure and integrates with key Microsoft technologies to help organizations strengthen cryptographic posture and improve readiness for modern security requirements.

Initial integrations and discovery coverage include:

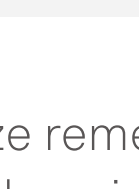

- Azure Key Vault
- Microsoft SQL Server encryption
- Certificate visibility across Azure-connected workloads

Why Organizations Use ISARA Advance On Azure

Establish visibility into cryptographic assets and exposures

Reduce manual effort required to identify cryptographic risk

Prioritize remediation based on risk and business impact

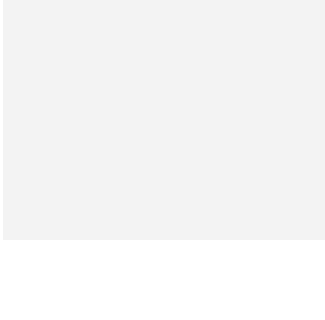

Support enterprise crypto agility and modernization efforts

Improve reporting for executive and technical stakeholders

High Stakes Results

STRENGTHENING CRYPTOGRAPHIC VISIBILITY FOR A GLOBAL ENTERPRISE

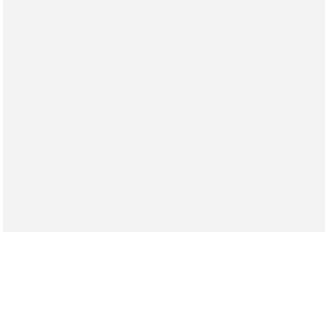

Enterprise Cloud Security Case Study

A large enterprise operating across multiple cloud and on-premise environments needed better visibility into its cryptographic assets and exposures. Security teams struggled with fragmented inventories, inconsistent configurations, and limited insight into where cryptography was being used across applications and infrastructure.

Key Outcomes:

- Enterprise-wide cryptographic asset visibility
- Identification of high-risk configurations
- Faster remediation across Azure workloads
- Improved reporting for leadership and compliance

ENHANCING CRYPTOGRAPHIC VISIBILITY FOR A GLOBAL ORGANIZATION

Cloud Cryptography Visibility Transformation

A large organization lacked visibility into cryptographic assets across its cloud environment, with fragmented inventories and limited insight into encryption. Using ISARA Advance on Microsoft Azure, it implemented automated discovery, risk prioritization, and continuous monitoring to improve its cryptographic security posture.

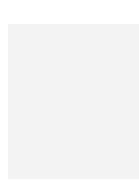

Key Outcomes:

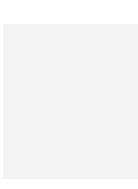

- Comprehensive visibility into cryptographic assets
- Detection of critical misconfigurations & exposures
- Faster remediation across cloud environments
- Improved reporting for executives and compliance

Frequently Asked Questions

- What is ISARA Advance on Microsoft Azure?**

ISARA Advance™ on Microsoft Azure is a cryptographic posture management platform that helps organizations automatically discover cryptographic assets, identify weaknesses, quantify risk, and prioritize remediation across applications, infrastructure, and source code.
- How does ISARA Advance identify cryptographic risks?**
- How quickly can ISARA Advance start delivering insights?**
- What Microsoft Azure services does ISARA Advance integrate with?**
- Who benefits from using ISARA Advance?**
- How does ISARA Advance help organizations prioritize remediation?**

Turn Quantum Readiness Into a Competitive Advantage

Early visibility, risk-based remediation, and crypto-agile systems allow teams to adapt to new standards on their own timelines, not under pressure or costly correction.
